

Here's the step by step...there's 3 parts they need for putting the beds together

Here's the feet that connect the two sides platform of the bed, there are 4 holes, two on each side for the wooden pieces to connect both side; and the there are two slightly bigger holes on each end for the screws

The horizontal end should have three holes, two of them lining up are for the wooden pieces and the third one is the screw.

The vertical end should only have two holes, for the wooden pieces only **NOTE: NO SCREWS!!!**

For the horizontal end there are two screws sticking out and for the vertical end there is a fixture that has two hooks looking thing.

Once you hooked the hook to the screws they should connect, and it is steady.

Because of this dual process, one screw on each leg is enough with the help of the wooden pieces to connect the sides and legs together. So one bolt/screw for each leg/feet piece. If you have any questions, let me know.
